network

sealcore.net

From the year 2015 the SEALCORE Network gathers various Companies from the Bergamo area, in Italy, active for many years in the worldwide market, and in many industrial sectors. The synergy and the know-how of the Companies in the SEALCORE Network provide the guarantee of a Quality Made in Italy, a complete service to

meet the needs of the global market, and a wide range of Technical Items: Standard and Endless O-Rings, Rotary Shaft Oil Seals, Industrial Components in Rubber-to-Metal and Elastomers, Liquid Silicon, Sliding Bearings and Washers, PTFE and HPP - High Performance Polymers.

Large sizes and Endless
O-Ring produced with an
innovative step-molding
method

A Network where all the Companies share information, Know-How marketing services and the approach to the customers worldwide, keeping their own independence.

A Network where elasticity in the service, deep focus and strong relationship with the customers, and the attention to the global market needs, makes the difference to success.

SEALCORE is a global Network, and provides a 360° full service controlling any single step of the production.

The whole Network is active in various sectors, through 12 Companies strictly dedicated to the production of Industrial High-Technical grade components.

SEALCORE Network is a guarantee from the design to the realization and production of the molds, to the final products.

SEALCORE Network is a winning philosophy from the manufacturing to the final control of the finished parts with various quality grades.

2014 the Company FLUORTEN S.r.l. joins the SEALCORE Network
2015 Sell-off of the Company Ghivi S.r.l.

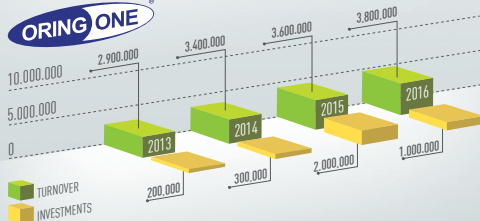

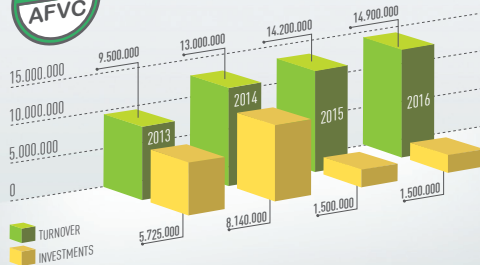

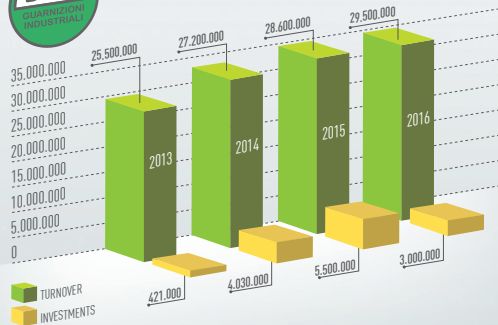

These data refer to the whole SEALCORE Network:
ORINGONE S.r.l. - DUCI S.r.l. - A.F.V.C. S.r.l. - DUEPI S.r.l. - IL PREZZEMOLO S.r.l.
FLUORTEN S.r.l. - F.LLI PARIS S.r.l. - ATS S.r.l. - SLIB ITALY - FP MILANO S.r.l.
FP MODENA S.r.l. - GOA GOMMA S.r.l.

We have been producing O-Rings since the foundation date, in 1983. Year after year we have produced and sold billions of pieces, and today DUCI S.r.l. is one of the most important European realities for the production of O-Rings, and related molded parts.

Our O-Ring's Division has developed a great experience thanks to the competence, perseverance and initiative of its staff. Service and ratio between high quality and good

price allowed us a continuous growth, making us a solid and modern Company always in the van. The O-Ring's division is divided in 4 different sites. Two production sites: one in Chiuduno (BG) and one in Bolotana (NU) where we carry out the complete injection moulding and finishing process. One logistic center in Chiuduno (BG), and next to it a modern Tool shop where we can produce up to 15 new moulds per week, and fulfill the demand for tooling of the two production units.

ILPREZZEMOLO

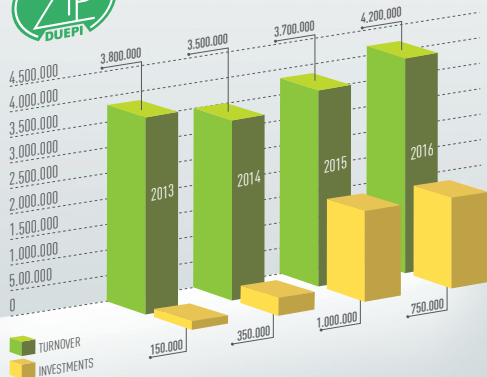

Duepi Srl was founded in 1989 as a Company specialized in the design and construction of moulds. Since 1991, in order to better fulfill the requests of our customers, we have expanded our product range by adding an area dedicated exclusively to the moulding of polymers and technopolymers. We can guarantee now a complete production cycle for our products. Significant technological investments have made Duepi Srl a reliable partner that works closely with the customer from the idea to the final product, offering added value to the care for details, with an excellent quality-price ratio.

The mould production area features many machines and equipments. The production facility dedicated to finished products is equipped with presses of various tonnage,

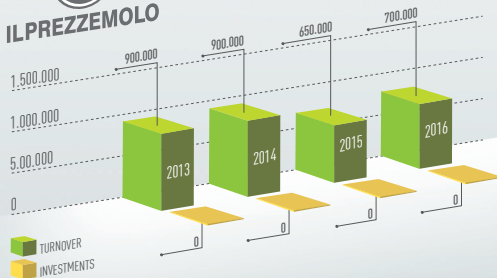

from 35 to 350 tons. The recently built presses include robots to pick-and-place the ready produced parts.

The staff of designers and design engineers specialized in the co-engineering service do guarantee a deep professionalism in the original product prototyping. DUEPI S.r.l. offers many tailor made solutions, and since 2014 is investing in new hi-end productions for special materials like Liquid Silicon, and luminous Techno-polymers.

The division Il Prezzemolo focuses to the production of cosmetic packaging made of various thermoplastic polymers.

ILPREZZEMOLO

PTFE AND HPP HIGH PERFORMANCE POLYMERS

Since its foundation in 1966, FLUORTEN has always identified itself with the brand that distinguishes high Quality products. Over the years, the Company has been able to develop solidly, with a growth compatible to its own technical and economic capacities. The activity started with fluoropolymers has been

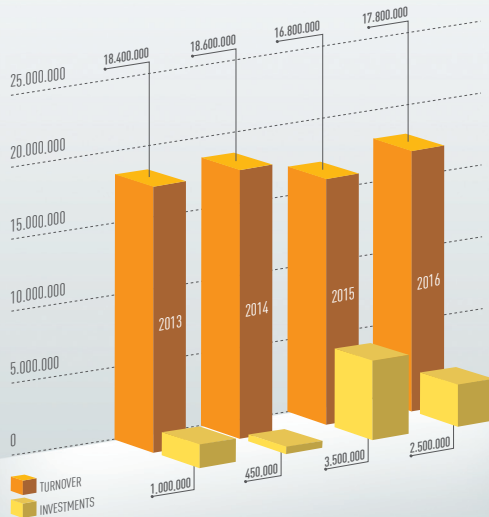

gradually expanded with the processing of technical parts in technopolymers, closely developed with the Customer.

FLUORTEN corporate “philosophy” to work with each Customer to solve project design and production problems to obtain a competitive product, has continuously driven the Company to invest in people and technologies. Currently FLUORTEN production is composed of very modern project design, extrusion, moulding and mechanical processing plants to supply semi-finished or finished products in PTFE and injection moulded Technopolymers of the highest Quality as well as technicians that can guarantee an internal process with monitoring and reliability standards that are difficult to find elsewhere.

We believe that the “dimension” of a company can also be measured by its ability to grow culturally, alone and together with its Customers. We are sure that in these years we have contributed, thanks to the enthusiasm we always dedicate to our job, not only to increase our level of knowledge and experience of the process, but also to increase the Quality of relationships between anyone that operate together with us in the market.

“To provide the market with a technical and commercial service able to satisfy any specific need, respecting our corporate model based on two main principles: constant technological development of the process and Quality improvement”.

2015 Sell-off of the Company Ghivi S.r.l.

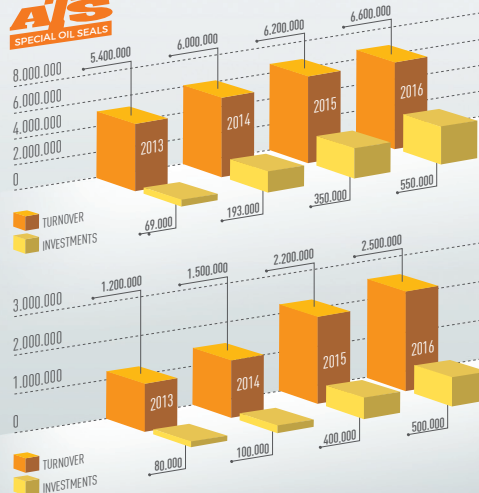

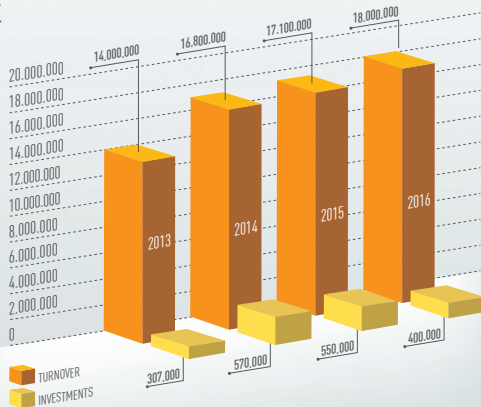

ROTARY SHAFT OIL SEALS
RUBBER INDUSTRIAL COMPONENTS
SLIDING BEARINGS AND WASHERS

The joint production capacity of F.lli Paris S.r.l., founded in 1979, and ATS Special Oil Seals S.r.l. founded in 1983, allows us to propose to the market a wide range of Rotary shaft Oils Seals Standard and with Large size, for common and Heavy Duty applications (water, oil and grease). In addition to this key production, FP and ATS are very strong with the production of technical industrial components to drawing in rubber-to-metal and various elastomers.

We have a full production capacity. From the design and realization of the moulds, to the compression moulding of the seals based on specific customer's requirements. Starting year 2011 F.lli Paris S.r.l. extended its article's range to the division SLIB ITALY, specialized in the production of Sliding Bearings and Washers for valves and other applications for the hydraulic, power supply and primary metal industry.

Thank you very much for your attention
